~~Abstract of the invention~~

amend the paragraph on lines 11-24 as follows:

The present invention achieves this object by  
providing a plug-in electronic module which has: a  
housing, an electronic component arranged in the  
housing, and at least one external electrical contact  
connected to the electronic component, ~~where the~~ . The  
electronic module can be plugged into a holding

structure such that the external electrical contacts on the module come into contact with associated electrical contacts on a coupling partner during the plug-in operation, ~~and a~~ The plug-in electronic module also includes a mechanical protective apparatus which protects the electrical contacts from mechanical contact when the module is not plugged in and which exposes the electrical contacts when the module has been plugged into the holding structure, so that they can come into contact with associated electrical contacts on the coupling partner.
